DETAILED ACTION

This Office Action is in response to the Election filed on 7/18/03.

Applicant's election with traverse of 1-4 and 9-15 in Paper No. 6 is acknowledged. The traversal is on the ground(s) that "the method claims necessarily use the product and vice versa, and the field of search must necessarily cover both the method class and products class". This is not found persuasive because the assumption that a close relationship exists between the two invention is apparent, however, this in itself does not overcome the restriction requirement. According to the MPEP 803 the proper criteria between for a restriction is (1) the invention must be independent and separated and (2) there must be serious burden on the Examiner if the restriction is not required. The product and the process of manufacturing an ESD are considered to be separated and independent by the Office. They are classified in two different art classifications. It would be a serious burden on the Examiner to examine two such distinct inventions despite the fact that they are so closely related.

The requirement is still deemed proper and is therefore made FINAL.

In addition to the above Applicant's election of Group I, claims 1-4 & 9-15, this group contains claims directed to the following patentably distinct species of the claimed invention:

a) Species I: claims 1-4, drawn to a method for stacking a first and a second rectangular sheet and applying a perpendicular load to the second sheet.

b) Species II: claims 9-15, drawn to a method for manufacturing a liquid crystal display panel.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Yennhu B Huynh whose telephone number is 703-308-6110. The examiner can normally be reached on 8.30AM-7.00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Carl Whitehead, Jr., can be reached on 703-308-4940.
